Ali telefon prebere kode? • Preizkus pred naročilom

⚠ **Natisni v DEJANSKI VELIKOSTI (100 %, ne »prilagodi strani«). Črna črta spodaj mora meriti točno 50 mm.**

1. Odpri bralnik na telefonu (Chrome)

Skeniraj kodo ali vpiši naslov. Dovoli kamero. Ni treba nič nastavljati.

bozicna-dirka-test.pages.dev/bralnik.html

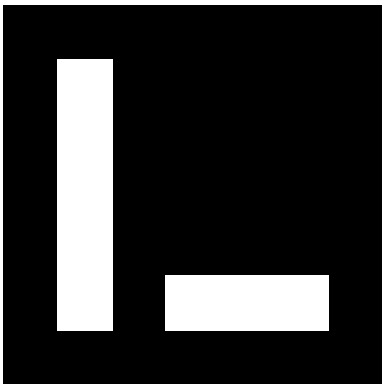

1. **Prava velikost (strani 2–4):** 24 kod po 50 mm, točno take, kot bodo na disku. Eno položi na mizo, telefon drži **15–25 cm** nad njo, na zaslonu tapni kodo. Po ~1 s mora pisati pravo polje (npr. **POLJE 7 · +2**). Nato tapni ✓ **PRAVILNO** ali ✗ **NAROBE** – rezultati se samodejno pošljejo v pregled.
2. **Gibanje (stran 5):** izreži krog, v sredino zapiči žebljiček, zavrti z roko. Ko se ustavi, mora bralnik pokazati polje pod ▼. Kode so tu manjše (20 mm), zato telefon drži bližje (10–15 cm).
3. **Težji pogoji:** preizkusi pri slabi svetlobi salona, s strani pod kotom in z gumbom 🔦 (luč telefona).
4. **Rezultat:** če bralnik vsaj 20 od 24 kod prebere v 1–2 sekundah, so kode primerne za izdelavo.

Kontrola tiska

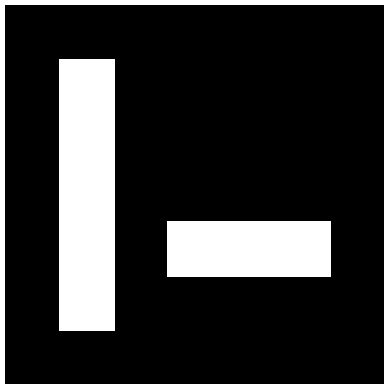

= 50 mm (ravnilo)

Koda za disk: črn kvadrat **50 × 50 mm** + bel rob **5 mm** = **60 × 60 mm**. Mat papir ali mat nalepka, brez sijaja.

Papirnato testno kolo

Izreži krog, v sredino (⊕) zapiči žebljiček v karton in vrti z roko. Telefon drži nad ▼, na zaslonu tapni kodo pod puščico.
